

# GVD NVR Supports Milestone VMS

**3rd May 2019** - GVD, the experienced developer of sophisticated video solutions, now gets the support from ONVIF® Profile G and brings their NVRs faster and easier data exchange with Profile G clients, such as video management software.

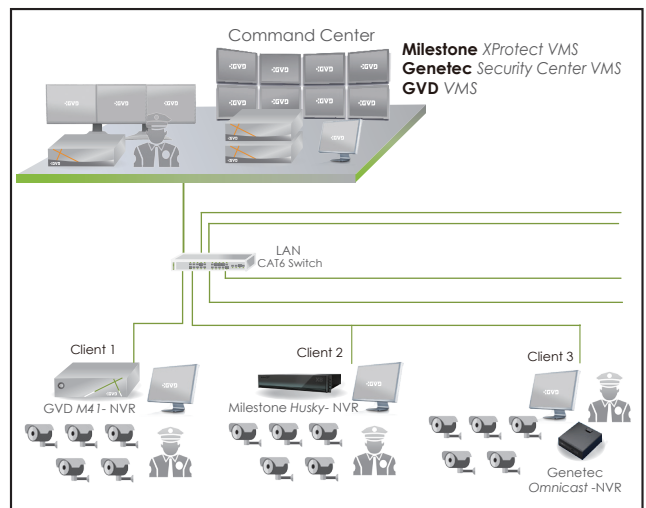

With the help from ONVIF® Profile G, GVD NVRs can record, search, and replay a video, audio, or metadata in a 3rd-party NVR or video management system.

If your video management system is **Milestone XProtect** or **Genetec Security Center** and you are planning for an expansion, it is perfectly alright to stack up GVD NVRs in it. The ONVIF® Profile G will bring GVD NVRs quickly on board and allow fluent archive and retrieval of video/audio.

Except for 3rd-party NVRs and VMS, GVD NVRs can quickly join state-of-the-art heterogeneous systems, including Building Automation and PSIM ("physical security information management"), also thanks to the help from ONVIF® Profile G.

The ONVIF® Profile G makes GVD NVRs even more capable of critical missions, including central law enforcement, smart city projects, and homeland security.

For more details about GVD' ONVIF® Profile G NVRs, please visit:
